1. SUBGUIT: FORMS AN HETERODIMER WITH PISTILLATA.

1. SUBCELLULAR LOCATION: NUCLEAR.

1. TISSUE SPECIFICITY: EXPRESSED IN PETALS AND STAMENS.

1. MISCELLANEOUS: MUTATIONS IN AP3 GAUSE TRANSFORMATION OF PE INTO SEPALS AND STAMINA INTO CARPELS.

1. SIMILARITY: BELONGS TO THE MADS DOMAIN FAMILY OF TRANSCRIPTIONS.

1. SIMILARITY: CONTAINS A PROBABLE DIMERIZATION DOMAIN FOUND SRF-TYPE TRANSCRIPTION FACTORS (K-BOX).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rooney T., Rizzo M., Walts A., Utterback T., Fujii C.Y., Shea T.P Creasy T.H., Heas B., Malti R., Wu D., Peterson J., Van Aken S., Pal G., Militscher J., Sellers P., Gill J.E., Feldblyum T.V., Preuss D., Lin X., Nierman W.C., Salzberg S.L., White O., Venter Fraser C.M., Kaneko T., Nakamura Y., Sato S., Kato T., Asamizu E. SUBCELLULAR LOCATION: PLASMA MEMBRANE.
phospho-D-gluconate.

PATHWAY: SECOND STEP IN PENTOSE PHOSPHATE PATHWAY.

SIMILARITY: BELONGS TO THE GLUCOSAMINE/GALACTOSAMINE-6-PHOSPHATE
ISOMERASE FAMILY. 6-PHOSPHOGLUCONOLACTONASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: BELONGS TO THE SMALL GTPASE SUPERFAMILY. "Bim: a novel member of the Bcl-2 family that promotes apoptosis.";

LEMBO J. 17:384-395(1998);

C -!- FUNCTION: INDUCES APOPTOSIS. ISOFORM BIML IS MORE POTENT THAN

ISOFORM BIMEL.

C -!- SUBUNIT: FORMS HETERODIMERS WITH A NUMBER OF ANTIAPOPTOTIC BCL-2;

PROTEINS INCLUDING MCL-1, BCL-2, BCL-XL, BFL-1, AND BHRP-1. DOES

NOT HETERODIMERIZE WITH PROAPOPTOTIC PROTEINS SUCH AS BAD, BOK,

BAX OR BAK (BY SIMILARITY).

C -!- SUBCELLULAR LOCATION: ASSOCIATED WITH INTRACYTOPLASMIC MEMBRANES

C (BY SIMILARITY).

C -!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; BİMEL (SHOWN HERE) AND

BIML; ARE PRODUCED BY ALTERNATIVE SPLICING.

C - LOMANN: THE BH3 DOMANN IS REQUIRED FOR BCL-2 BINDING AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query

Biol. Chem. 267:22534-22541(1992).

1. BIOL. Chem. 267:22534-22541(1992).
1. FUNCTION: NOT KNOWN BUT IT COULD ACT AS A TRANSMITTER AT NEUROMUSCULAR SYNAPSES.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New peptide conjugates for modulating apoptosis or for inhibiting æ

```
The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain is NH2 or OH; or X = O or NH, CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide, where the side chain functional group is COOH CC or two double bonds, cyclobutyl, cyclopentyl, cyclobaxyl optionally containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclobaxyl optionally composubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AB37001-B37058 represent examples cof the peptide portion of the conjugate. The peptide conjugate is cof the BH3 domain of the cell death agonist BAC The peptide conjugate is cuseful for modulating apoptosis in the cells of a subject, or for corresponding to amount of the cells. It is also useful for inhibiting BCl-2 subject with a cancer characterized by cancer cells that cancer includes prostate, colorectal, gastric, consensal lung, renal or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is sation or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is sation or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating a cute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is sation or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating a cute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders, acquired by cancer characterized by cancer characterized by concersed apoptosis, e.g. neurodegenerative disorders, acquired considered in the considered considered considered considered considered considered considered considered considered considered considered considered

The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain is NH2 or OH; or X = O or NH.

CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide, where the side chain functional group is COOH CC or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally CC monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ANA37001-B37058 represent examples of the peptide portion of the conjugate. The peptides represent analogues CC of the Peptide portion of the conjugate. The peptide conjugate is CC susping B cell lymphoma/lukemia 2 (Bc-2)-mediated blockage of cxeversing B cell lymphoma/lukemia 2 (Bc-2)-mediated blockage of cxeversing B cell lymphoma/lukemia 2 (Bc-2)-mediated blockage of cunction. In particular, the peptide conjugate is useful for treating a caute or chronic lymphocytic and non-lymphocytic lukemia. The peptide colorectal, gastric, con-small lung, renal or thycoid cancers, neuroblastoma, melanoma, or caute or chronic lymphocytic and non-lymphocytic lukemia. The peptide conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired configure is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired configure is also useful for cancer characterized by cancer calls that cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptide conjugates cell lymphoma/leukemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2000-679325/66

Bcl2

polypeptide BH3 domain peptide #3.

Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction. 06-APR-2000; Homo sapiens. 2000WO-US09352 99US-0128202

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, where the side chain functional group is attached to the C-terminus of the peptide, or a cC side chain of the peptide, where the side chain functional group is COOH CC or two double bonds, cyclobusyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cyclobusyl cyclopentyl, cyclobesyl optionally cC phenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, CC phenyl group, or benzyl. The peptides ABB37001-B37058 represent analogues CC of the peptide portion of the conjugate. The peptides represent analogues CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BH3 domain of the cell death agonist Bad. The peptide conjugate is CC useful for modulating apoptosis in the cells of a subject, or for CC apoptosis in cancer cells. It is also useful for inhibiting BCl-2 apoptosis in cancer cells. It is also useful for inhibiting BCl-2 constant in particular, the peptide conjugate is useful for treating a CC subject afflicted with a cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, colorectal, gastric, constant ung, renal or thyroid cancers, neuroblastoma, melanoma, or CC acute or chronic lymphocytic and non-lymphocytic leukamia. The peptide influenced poptions, seed the source characterized by cancer cells that seed influenced the source call of the conjugate is a lasouseful for treating a service conjugate is also useful for treating a service conjugate is acquired inmunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

CC (R-X)n peptide where n = 1-10; X = C=0, when the R-X group is attached CC (R-X)n peptide where n = 1-10; X = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC when the R-X group is attached to the C-terminus of the peptide where CC or two double bonds, cycloburyl, cyclopentyl, cycloberyl potionally GC monosubstituted with a 1-5C straight or branched chain at hyl group or benzyl. The peptides where CC of the peptide with a 1-5C straight or branched chain alkyl group. CC phenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group. CC of the peptide portion of the conjugate. The peptides represent examples CC of a bcl 2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BH3 domain of the cell death agonist Bad. The peptide conjugate is cuseful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphomaylesthemia 2 (Bcl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for treating a cc subject afflicted with a cancer characterized by cancer cells that cancer or bronic lymphocytic and non-lymphocytic leukemia. The peptide correctal, gastric, con-small lung, renal or thyrold cancers, neuroblastoma, melanoma, or conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 18;

CC (R-X)n-peptide where n = 1-10; x = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC when the R-X group is attached to the C-terminus of the peptide where CC when the R-X group is attached to the C-terminus of the peptide, where the side chain functional group is COOH CC or two double bonds, cycloburyl cyclopenryl, cycloberyl optionally correspond to the cyclopenryl cyclopenryl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB37001-B37058 represent analogues CC of the peptide portion of the conjugate. The peptides represent examples CC of a Bally group, or benzyl. The peptides ABB37001-B37058 represent analogues CC of the BH3 domain of the cell death agonist Bed. The peptide conjugate is conseculating apoptosis in the cells of a subject, or for CC useful for modulating apoptosis in the cells of a subject, or for CC useful for modulating apoptosis in the cells of a subject, or for CC useful for matricular, the peptides conjugate is useful for treating a CC subject afflicted with a cancer characterized by cancer cells that CC express Bc1-2. The cancer includes prostate, colorectal, gastric, con small lung, renal or thyrold cancers, neuroblastoma melanoma, or CC conjugate is also useful for treating a coute or chronic lymphoytic and non-lymphoytic leukemia. The peptide conjugate is equired increased apoptosis, e.g. neurodagenerative disorders, acquired conjugate is an outperfied by cancer characterized by cancer calls that cancer on a new constant in the peptide conjugate is acquired conjugate is a second apoptosis, e.g. neurodagenerative disorders, acquired conjugate is acquired in munodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

apoptosis, Ser113 -New mutant Bc1-XL/Bc1-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Seril8, Seriss or

Claim 7; Page 148-149; 157pp; English

The present invention describes an isolated or synthetic polypeptide (1) comprising a less than full length amilo acid sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of a mutant CC fell sequence of this bit of a fell sequence of antiarthritic, antiinflammatory and immunosuppressive activities, and compared to the used as an apoptosis inducer or inhibitor. BAD polypeptides and CC can be used as an apoptosis inducer or inhibitor. BAD polypeptides and CC for activity that promote cell survival or apoptosis. Other uses include CC inductory or inhibiting apoptosis in a cell. Candidate compounds of inhibiting apoptosis in a cell. Candidate compounds of immunodeficiency diseases, neurodegenerative diseases, ischaemic cell ceath, reperfusion cell death, wound healing, cancer, vital infections, lymphoproliferative conditions, arthritis, infertility, inflammation and CC autoinmune diseases. The present sequence represents a specifically collaimed shorter mutine BAD mutant amino acid sequence from the present CC invention.

```
This sequence represents the murine bcl-x(L)/bcl-2 associated death cc promoter (Bad) gene. Bad is a 22.1 kD protein which interacts with c bcl-2 and bcl-x proteins and regulates cell death. It has homology ct to the bcl-2-related family clustered in the BH1 and BH2 domain. Bad casays and in vivo in mammalian cells. Overexpressed Bad counters the cc death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-x(L). Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an accelerate apoptotic cell line expressing bcl-x(L), and its also counters, the cdeath repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-2 or bcl-x(L) to form heterodimers. Such agents may be used to treat neurodegenerative diseases, immunodeficiency diseases, cc e.g. AIDS, senescence or ischaemia.
                                                                                                                                                                                                                     Matches

```
CC death regulator) proteins, having an amino acid other than Ser at CC position 112 and/or 136, relative to the murine BAD 204 as sequence. The CC present sequence is the murine BAD protein. Also described are: (1) CC fragments of mutant BAD protein also decrease cell visibility; (2) CC fusion proteins of mutant BAD protein also decrease cell visibility; (2) CC fusion proteins of mutant BAD with a heterologous polypeptide that CC or prevent diseases associated with reduced approteins are used to treat CC or prevent diseases associated with reduced approteins, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, e.g. cancer, CC viral infection, lymphoproliferation, arthritis, infertility, e.g. cancer, CC unimantion and autoimmune disease. Polypnorleotide sequences encoding CC unimation BAD proteins can be used similarly by gene therapy or to produce transgenic enimals for use as disease models or in drug screening. BAD CC proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serime-phosphatase. Inhibitors are potentially useful cell death. The apoptotis status of cells is aging or ischaemic cell death. The apoptotis status of cells is certained by measuring relative amounts of phosphorylated and non-phosphorylated on the specified Ser, forming a product that does not phosphorylated on the specified Ser, forming a product that does not phosphorylated on the specified Ser, forming a product that does not phosphorylated contents with BCL-2 or BCL-XL but instead binds to 14-3-3 family CC groteins in the cytosol, thus promoting cell survival. The mutants with CC ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Fig 10; 95pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell clear through the proteins, having an amino acid other than Ser at CC position 112 and/or 136, relative to the murine BAD 204 as sequence. The CC present sequence represents a mutant BAD protein. Also described are: (1) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) CC inflammant diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, continuation and autolumnume disease. Polynucleotide sequences encoding continuation and autolumnume disease models or in drug screening. BAD CC inflammation and autolumnume disease models or in drug screening. BAD CC inflammation are used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD CC and inhibitors of serine-phosphatuse. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, and inhibitors of serine-phosphatuse unch as AIDS, neurodegeneration, and or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated and non-complete with BCL-2 or BCL-XL but intstead binds to 14-3-3 family CC proteins in the specified Ser, forming a product that does not the terrodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family CC proteins in the cytosol, thus promoting cell survival. The mutants with the complete cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                   Ouery Match 100.0%; Score 138; DB 19; Best Local Similarity 100.0%; Pred. The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell clearly regulator) proteins, having an amino acid other than Ser at CD position 112 and/or 115. relative to the murine BAD 204 as sequence. The CD position 12 and/or 135. relative to the murine BAD 204 as sequence. The CD present sequence represents a mutant BAD protein. Also described are: (1) CC fragments of mutant BAD protein able to decrease cell viability; (2) CC fusion proteins of matant BAD with a heterologous polypeptide that the proteins are used to treat cor prevent diseases associated with reduced apoptosis, e.g. cancer, (1) CC viral infection, lymphoproliferation, arthritis, infertility, contains and autoimmune disease. Polynucleotide sequences encoding cutant BAD proteins can be used similarly by gene therapy or to produce transpends on independent and autoimmune diseases models or in drug screening. BAD cc and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis used as atos, neurodegeneration, and inhibitors of excessive apoptosis used as atos, neurodegeneration, can determined by measuring relative amounts of phosphorylated and non-posphatase with BCL-2 or BCL-XL but instead bad which can become composition and the Specified Ser, forming a product that does not beterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family CC proteins in the cytosol, thus promoting cell survival. The mutants with acc ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 7; Page 60; 95pp; English.

                                                                                                                                                                                                                                                                                           CC death regulator) proteins, having an amino acid other than Ser at cost of acid regulator) proteins, having an amino acid other than Ser at cost into 112 and/or 136, relative to the murine BAD 204 as sequence. The CC position into and/or 136, relative to the murine BAD 204 as sequence. The createst and the cost of the murine BAD 204 as sequence. The createst intracellular delivery. Mutant BAD protein. Also described are: (1) CC increases intracellular delivery. Mutant BAD proteins are used to treat createst inflammation and autolimure disease. Polynucleotis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, confidences encoding contrating and autolimure disease. Polynucleotide sequences encoding contrating proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, actinity of the product of etermined by measuring relative amounts of bosphorylated and non-complete the promoting activity than wild-type BAD which can become company and product that does not heterodimerise with BCL-2 or BCL-Xi but instead binds to 14-3-3 family consultations in the cytosol, thus promoting cell survival. The mutants with accomplete with BCL-2 or BCL-Xi but instead binds to 14-3-3 family consultations of the specified Ser, forming a product that does not accomplete with BCL-2 or BCL-Xi but instead binds to 14-3-3 family consultations of the specified Ser, but instead binds to 14-3-3 family consultations of the specified Ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                              Query Match

This sequence represents a novel serine-phosphorylated protein, BAD (Bc1-X1/Bc1-2 associated cell devolator). The serine residue is phosporylated in a post-translational modification and allows binding to the 14-3-3 protein which is a signal transduction regulator. Modulators of phosphorylated BAD, which at through inhibition/activation of a phosphorylated BAD, which at through inhibition/activation of a phosphorerine phosphatase, are useful for preventing/treating increased/decreased apoptosis in a cell. The increased apoptosis may result from immunodeficiency diseases, senescence, neurodegenerative disease, ischaemic cell death, reperfusion cell death, infertility and wound-healing. Decreased apoptosis may result from cancer, viral infection, lymphoproliferative conditions, arthritis, infertility, inflammation and autoimmune diseases. Measuring the amount of phosphorylated compared to unphosphorylated BAD polypeptide and/or total phosphorylated compared to unphosphorylated BAD polypeptide and/or total BAD in a cell is useful for determining the apoptotic state of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Serine-phosphorylated Bcl-X-1/Bcl-2 Associated cell Death regulator polypeptide - useful for modulation of apoptosis associated with, e.g. cancer and immunodeficiency diseases
Bcl-XL/Bcl-2 associated ceil death regulator; BAD; mutant; apoptosis; immunostimulant; neuroprotective; nootropic; antilischaemic; vulnerary; cytostatic; antiviral; antiarthritic; antiinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; ischaemic cell death; reperfusion cell death; arthritis; infertility; lymphoproliferative condition; inflammation; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            serine phosphorylation; post-translational modification; apoptosis; signal transduction regulator; phosphoserine phosphatase; senescence immunodeficiency disease; neurodegenerative disease; infertility; cancer, viral infection; lymphoproliferative condition; arthritis; inflammation; autoimmune diseases.

                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an isolated or synthetic polypeptide (1) comprising a less than full length amino acid sequence of a mutant CC Edl-KLDC1-2 associated cell death regulator polypeptide (BAD) or its crayment, which contains amino acid substitutions at Seril8 of a human CC BAD, SeriS5 of a murine BAD) (1) has immunostiputed by or Seri31 of a murine CC BAD (SeriS5 of a murine BAD) (1) has immunostiputed antivital of a nurine CC BAD (SeriS5 of a murine BAD) (1) has immunostiputed activities, and contained an apoptosis inducer or inhibitor. BAD polypeptides and contained the seed as an apoptosis inducer or inhibitor. BAD polypeptides and complete can be used as an apoptosis inducer or inhibitor. BAD polypeptides and complete can be used for screening candidate compounds and drugs of antivity that promote cell survival or apoptosis. Other uses include inducting or inhibiting apoptosis in a cell. Candidate compounds of inducing or inhibiting apoptosis in a cell. Candidate compounds continuous diseases, neurodegenerative diseases, viral infections, lymphoproliferative conditions, architits, infartility, inflammation and containmune diseases. The present sequence represents a specifically contained longer murine BAD mutant amino acid sequence from the present of invention.
                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                     The sequence represents the amino acid sequence of Bad-DTTR apoptosis-
CC modifying fusion protein comprising Bad gene sequence fused via a short
CC linker to diphtheria toxin translocation domain (DTTR). The
CC functional apoptosis modifying fusion protein is capable of binding a
CC target cell. The apoptosis modifying fusion protein comprises at less
CC target cell and integrating into or crossing a cellular membrane of the
CC target cell and the Bcl-XL domain, which targets the fusion protein to the
CC target cell and the Bcl-XL domain, which modifies an apoptotic response
CC (inhibiting or enhancing) apoptosis in a target cell, such as neuron,
CC lymphocyte, cancer, neoplasm, macrophage, epithelial, stem, tumour or
CC tympher proliferative cell or an adipocyte. It is also useful for reducing
CC apoptosis in a subject after transient ischemkt neuronal injury,
CC especially spinal cord injury conditions through inhibition or enhancement
CC various diseases and injury conditions through inhibition or enhancement
CC such as Alzheimer's disease, Huntington's disease, Spinal muscular
CC various cancers. The apoptosis modifying fusion protein man be delivered
CC effectively throughout the body and targeted to selective tissue and

The sequence is disclosed as being a protein called BBC6 which regulates cell death through interaction with BC1-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or diagnostic procedures, as a molecular weight marker, and to realse antibodies that can be used in unspecified diagnostic or therapeutic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US5663316-A.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              231628 seqs, 24425594 residues

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
